ORLANDO JORDAN

MECHATRONICS ENGINEERING STUDENT
AI & AUTOMATION PROJECTS

I build practical automation solutions that reduce repetitive work, improve data consistency, and turn manual processes into structured digital workflows. My experience combines AI-assisted development, process analysis, data validation, and clear technical documentation.

CURRENT OBJECTIVE

Internship or entry-level opportunity

AI, automation, data and process improvement roles

EMAIL
pragma.pa@gmail.com

LINKEDIN
/in/orlandojordannunez

FOCUS AREAS

- AI-assisted workflows
- Process automation
- Data validation
- Technical documentation

PROFILE

Independent project work under Pragma AI Studio, focused on applied AI and automation rather than a commercial company profile.

CORE TOOLS

- Node.js
- n8n
- Google Apps Script
- REST APIs
- Supabase / PostgreSQL
- Railway
- OpenAI API

LOCATION

Panama

Selected Projects

Three examples showing how I approach functional systems, workflow automation and structured AI-assisted drafting.

FUNCTIONAL PROJECT

Pragma Pulse

Automated market briefings

A working system that collects multiple information sources and delivers scheduled market briefings through a Telegram-connected workflow. It demonstrates backend orchestration, scheduled execution and reliable information delivery.

STACK

- Node.js / Express
- PostgreSQL
- Railway
- Telegram Bot API
- Scheduled jobs

Demonstrates: backend integration, scheduling and information processing

AUTOMATION COLLECTION

Google Workspace & n8n Automation

Operations and productivity workflows

Workflows for stock alerts, PDF invoice generation, backups, structured data processing and Telegram-connected assistants using Apps Script, n8n and external APIs.

STACK

- Google Apps Script
- n8n
- Google Sheets
- REST APIs
- PDF generation

Focus: reduce manual work, standardize outputs and improve consistency

CONCEPT & PROTOTYPE

Legal Document Automation

Structured intake, drafting rules and human review

A prototype for structured client intake, drafting rules, consistency validation and legal-document drafts for professional review. It is an automation case study, not a finished commercial product.

STACK

- OpenAI API
- Node.js
- Supabase
- Validation rules
- Human review flow

Demonstrates: process mapping, rule-based drafting, validation and responsible AI

Experience & Capabilities

EXPERIENCE

Pragma AI Studio

Independent AI & Automation Projects | 2026 - Present

- Develop practical AI-assisted workflows for document generation, information processing and operational productivity.
- Map manual processes, define validation rules, test outputs and document how each workflow operates.

INEC - Comptroller General of Panama

School Internship | September - November 2025

- Reviewed and coded institutional records and digital questionnaires as part of a school internship evaluation.
- Supported classification, consistency checks and data-quality control before information moved to the next processing stage.

EDUCATION

Universidad Latina de Panama

B.Eng. Mechatronics Engineering | 2026 - 2030 (in progress)

Relevant coursework

Programming for Engineers, Applied Physics, Integral Calculus, Computer-Aided Design and Metrology.

Centro Bilingue Vista Alegre

High School Diploma in Technology

TECHNICAL SKILLS

AUTOMATION

- **n8n**
- **Google Apps Script**
- **Workflow design**

DEVELOPMENT

- **Node.js**
- **Python - learning**
- **C++**

DATA & BACKEND

- **PostgreSQL**
- **Supabase**
- **REST APIs**

DEPLOYMENT

- **Railway**
- **Git fundamentals**

ENGINEERING TOOLS

- **Fusion 360**
- **AutoCAD**

CORE CAPABILITIES

- Process mapping and automation opportunity identification
- Data validation and consistency checks
- Technical documentation for non-technical users
- Independent learning and troubleshooting

LANGUAGES

Spanish	Native
English	Intermediate Conversational and technical

OPEN TO INTERNSHIPS AND ENTRY-LEVEL OPPORTUNITIES

Let us discuss how I can contribute to automation, data or process-improvement work.
